Unice) to apport a ram enterprise towards dentity uniceessary costs, determine best value agricultural advinces and concessy monetize unicert ran logiste
inputo.
This tools provides an indicative assessment of farm profitability and should be complemented by deeper and more detailed assessments, market
analysis, and other due diligence, before committing to large-scale investments.
This tool comprises the following sheets:
Equipment & Assets: Available devices or those which are planned to purchase in future
Income: Add sales of seasonal crons (e.g. rice, maize), perennial crons (e.g. fruits), livestock and respective by products as well as additional income
such as the sale of water or rental of equipment
Financing: Calculates annual loan repayment based on credit information
Costs: Add all fixed and variable costs & expenditures of the farm enterprise
Income: Automatic calculation on gross profitability of the farm enterprise
The tool also offers a «Quick-Check» for a first rough estimation on the profitability of a farm and a sheet in which «Crop and Livestock Prices» can be
calculated.
